

Jet Chang

+1 (289) 218-8818 | jet.chang@mail.utoronto.ca | [Personal Website](#) | github.com/jcj1337

Education

University of Toronto, BAsc. in Industrial Engineering

Expected 2028

- Minor in Artificial Intelligence
- Relevant Coursework: Machine Learning, Deep Learning, Data Science, Probability, Statistics, Systems Modelling & Simulations, Engineering Strategies & Practice I–II, Object-Oriented Programming, Data Structures & Algorithms, Operations Research I–III

Skills

Languages: Python, SQL, R, TypeScript

Frameworks/Libraries: PyTorch, scikit-learn, XGBoost, pandas, NumPy, SciPy, Next.js, React, LangChain

Tools: Git, Docker, AWS S3, Node.js, REST APIs, Tableau, Excel

Experience/Projects

TCGracker — Trading Card Market Intelligence Platform | [Github](#)

Next.js, TypeScript, Python, LangChain, Claude, TCGDex and TCGCSV APIs

- Built a **full-stack platform** integrating TCGplayer prices, historical market data, and cleaned eBay comparable sales to generate explainable Recommended Buy prices and deal ratings
- Implemented an LLM semantic fallback **classifier** improving fallback holdout accuracy by $\approx 8\%$
- Ported the pricing engine from Python to TypeScript and verified exact output parity across **100+** product groups

Pre-Game Win Probability Estimator | [Github](#)

PyTorch, scikit-learn, XGBoost, Riot Api

- Trained a 3-layer **transformer** on **1M+** multi-region matches to estimate pre-game win probability using only pre-game features
- Built an end-to-end pipeline for API collection, feature engineering, and cached preprocessing, reducing repeat dataset-build time by $\sim 52\%$
- Final model outperformed best-tuned logistic regression and XGBoost models, achieving $\sim 72.2\%$ and $\sim 37.5\%$ lower calibration error
- Project academically documented | [Report](#)

Client Engineering Design Project — Acoustic Protection

University of Toronto

- Worked in a 7-person team with a **real client** to translate noise and privacy needs into quantitative design requirements spanning acoustics, land use, accessibility, environmental impact, and regulatory constraints
- Evaluated **50+** feasible designs through quantitative scoring and Pugh analysis, ultimately selecting a solution that used **0.4% of available property area** versus a client target of **5%**
- Presented the final design directly to the client, communicating **technical** trade-offs along with a physical prototype

Extracurriculars:

- Competitive League of Legends Player *2022-Present*
 - Consistently ranked top 50 in North America, frequently competing alongside and against **professional** players
 - Proven record of rapid decision-making, strategic adaptation, and team coordination in the world's #1 eSport
- Independent eSports Coach *2022-Present*
 - Analyzed client gameplay, match data, and recurring performance patterns to identify areas for improvement
 - Delivered individualized VOD reviews, improvement plans, and real-time decision-making feedback for **dozens** of clients
- Card Show Vendor *2026 Summer*
 - Managed inventory, pricing, and customer sales at regional trading-card shows
 - Adjusted pricing and inventory decisions based on demand, market value, and customer interest
